

Camden Group - Dairy Farms

4 x Solar Arrays, 2 x ESS Systems

Back in 2020, Camden Group, a large scale corporate dairying operation, engaged us to implement a solar array and energy storage system for the new dairy shed at their flagship site. The proof was in the pudding, as in the years since, they have installed solar on another 3 farms, all yielding exceptional results.

Project Highlights to date:

\$150k+ combined energy savings

400MWh+ total energy delivered

Over 30T CO₂e offset annually

"We were eager to future-proof our farms and embrace new technology going forward, and have been very pleased with the performance of the systems over the past several seasons."

- TERRY KILDAY, GENERAL MANAGER
